

PUTS FISH INTO A FEEDING FRENZY

How to use for Chumming (closed position):

1. Before putting chum into the Chum-King, first put weights in the bottom weight chamber.
2. Fill the Chum-King™ with your favorite frozen or thawed chum and sink it.
3. You'll want to use a comfortable line 3/16 is fine. Use about 10 ft of extra line to make up for any slack.
4. Keep the Chum-King™ closed while chumming. There's enough holes and was designed to allow small pieces of chum to escape in the closed position.
5. Chum exactly like you would with a net, bag or cage. Instead of bringing a messy net back into your boat, simply open the Chum-King™ in the water to remove any excess chum. You should never need a hose...it comes out that clean!!!!
6. Never deal with a dirty old bag, net or cage again!!!!

How to use for Bait Release (open position):

1. Partially fill the Chum-King™ with cut bait, live bait, or chunks.
2. As a rule of thumb, use the same bait that you are using on your hook.
3. Sink it in the Closed Position.
4. When the time is right, give a tug on your line and Chum-King's patented bait release system will release your bait underwater putting the fish into a feeding frenzy!
5. We recommend removing the Chum-King™ from the water once you've released your bait.
